U.S. Patent and Trademark Office PTOL-37 (Rev. 7-05) Application/Control Number: 10/629,056

Art Unit: 2629

## **Priority**

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## Allowable Subject Matter

- 2. Claims 1-22 are allowed.
- 3. The following is an examiner's statement of reasons for allowance: The prior arts Kim et al, Jang et al, Naito et al, and Neugebauer fails to recite or disclose the uniquely distinct features. A liquid crystal display device comprising a backlight assembly including a lamp driving device including a substrate facing the receiving container, a lamp driving module, mounted on the substrate, to provide the lamps with the power voltage, a plurality of sensors, disposed on the substrate to face the lamps, to detect an operation state of the lamps and to output a plurality of sensing signals, a voltage cut-off module, disposed on the substrate, to compare the sensing signals with a predetermined reference signal, the voltage cut-off module providing the lamp driving module with a voltage cut-off signal to prevent the lamp driving module from providing the lamps with the power voltage when at least one of the sensing signals has an amplitude smaller than the reference signal; and a liquid crystal display panel assembly, mounted on the receiving container, to display an image using a light generating from the lamps.

The closest prior art, Kim et al, Jang et al, Naito et al, and Neugebauer, either singularly or in combination, fail to anticipate or render the above bold and underlined limitations obvious.

Application/Control Number: 10/629,056 Page 3
